ABSTRACT

Accelerator – Course Management System

Technology is now becoming a tool to bring massive changes in the world. Be it any sector, from finance to healthcare or security to education. Life around us is changing rapidly. We believe that changes in technology are having profound effects on our lives and society. Teachers especially seem to be very interested in the use of Technology as a feasible solution for all educational levels. Students are also very excited to learn in some interesting ways.

Through Accelerator, we aim to bridge that gap between students and the real EDUCATION. Accelerator is a learning management platform where students can learn, take quizzes and monitor their progress. They can also submit their college assignments and can get learning resources related to their assignments. It is a teaching marketplace for teachers where they can sell their content. Accelerator uses a Micro-Payment system to process the transactions. Thus, users will only have to pay for what they use. It specifically focuses on making learning easier through an experiential approach. Through this platform, we intend to develop an experiential learning environment that can accelerate the growth of students.

Be a part of the change!
